

MICRONEEDLING FAST FACTS

Description of the Procedure:

Microneedling treatment induces new formation of collagen.

- ___ I understand that results will vary among individuals.
- ___ Multiple sessions will be required to achieve my desired goals
- ___ The goal of the procedure is to help minimize fine lines, sun damage and scars.
- ___ The procedure and side effects have been explained to me.

The microneedling procedure is normally completed in less than 30 minutes, depending on the required treatment and anatomical site. It is important to avoid sun exposure and to wear recommended PHYSICAL sunblock(SPF50)DAILY.

Failure to protect your treated skin from the sun will result in hyperpigmentation and mottling(post-inflammatory hyperpigmentation) (PIH) that may be permanent.

Expected Side Effects:

After the procedure, the skin will be red and flushed like a moderate sunburn. Bruising and/or microcrusting may occur with the microneedling treatment.

Contraindications:

- Active infections viral, fungal, bacterial
- Rashes, warts, skin cancer
- Active acne
- Immunodeficiency Patients
- Skin -related autoimmune disorders
- Pregnant or breast-feeding
- Patients on anticoagulants (NSAIDS, ASA, Coumadin/Warfarin)

Consent:

- I understand the risks and benefits of microneedling and desire to proceed with the procedure.
- All of my questions have been answered.
- **Patients ought to be realistic about the results that can be achieved without surgical intervention**
